EDITION NINE NEW PRODUCT UPDATE WELCOME

◆ In this catalogue

We have made a number of updates to help you browse through our new and current range of lighting, including:

- Over 100 new products
- Introducing our Colour Changing Technology (CCT) ranges
- Our popular Orbital range is extended using CCT
- Advanced technology with our Sirio daylight harvesting panels
- Increased easy to install fittings using our tool-less push fit terminal blocks
- Removal of all out of stock items & where applicable, we have suggested a suitable replacement*

Look out for these CCT icons as you look through our catalogue

*Correct at time of print

We are now offering
NEXT DAY DELIVERY
to all UK mainland
Saxby Lighting customers,
see website for details

NEW PRODUCT

ORBITALPRO RANGE

COLOUR CHANGING & LENS FREE

NEW
PRODUCT

At the flick of a switch, warm white or cool white

Using the latest in Colour Changing Technology (CCT), each OrbitalPRO can be warm white or cool white with a simple flick of a switch. The two sets of SMD LED modules project 430 - 1080 lumens of indirect LED light from the unique anti-glare dome. Supplied with a dimmable Eaglerise driver that works with leading and trailing edge dimmers

ORBITALPRO RANGE

ALL IN ONE FIRE RATED DOWNLIGHTER

EAGLERISE

- Die cast aluminium alloy & steel
- Min void: 75mm
- LED module (SMD 2835) CCT
- Colour Changing Technology (CCT) 3000K or 5000K
- Complete with LED driver

EASY INSTALLATION
Cover with insulation, whilst fitting in shallow ceiling voids

WARM WHITE & COOL WHITE
One fitting choose & change the colour - 3000K or 5000K

FULL OF FEATURES...

Fire Rated & IP65 Rated

Suitable for 30, 60 & 90 minute ceilings**

Die Cast Aluminium Dome

Can be covered in installation

Choice of Bezels

Chrome, satin nickel & matt white finish

Simple Flick of a Switch

Can be warm white or cool white

Slim Profile

Ideal for shallow ceiling voids

Lens Free

No Visible light source from the unique anti-glare dome

120° beam angle

**12W & 15W are suitable for 30 minute ceiling only

NEW PRODUCT SHIELDECO RANGE COMPACT & FUNCTIONAL

NEW
PRODUCT

Fire rated, dimmable, reliable

Ideal for domestic use, the ShieldECO range has all the features required of an everyday downlight; fire rated, IP65 and dimmable. Tool-less and quick to install due to the 4 way push fit screwless terminal block. The 4W LED SMD module produces 500 lumens of warm white or cool white light from the anti-glare 60° lens. Slim profile with a choice of finish, chrome, satin nickel and matt white

ShieldECO RANGE COMPACT, FUNCTIONAL & RELIABLE - EASY TO INSTALL

- Steel & acrylic
- Min void: 90mm
- Cut out: Dia 57mm
- 4W LED module (SMD 2835)
- 60° anti glare lens

TOOL-LESS INSTALLATION
With the 4 way push fit
screwless terminal block

IP65 RATED & FIRE RATED
For safety and peace of mind
in everyday use

ULTRA SLIM PROFILE SIRIODISC RANGE 12W, 18W & 24W

Available in warm white and cool white

**NEW
PRODUCT**

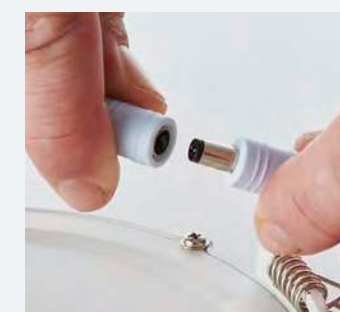

Our SirioDISC range complements our Sirio panel, making it an ideal choice for all office and corridor lighting. The 20mm ultra slim profile can fit into the slimmest of voids. The edge lit technology and high power SMD LEDs offer an even, superior light output, with no dark spots and reduced glare

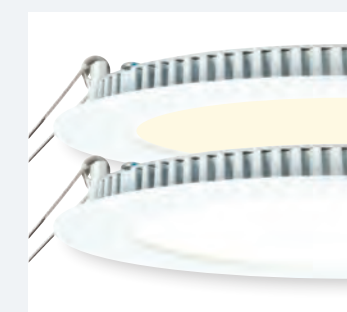

SIRIODISC RANGE ULTRA SLIM PROFILE

- Die cast aluminium alloy & acrylic
- Matt white paint & frosted acrylic
- Min void: 65mm
- LED module (SMD 2835)
- Complete with LED driver

SIMPLE INSTALLATION
Jack plug connects the SirioDISC and driver easily

POWERFUL & BRIGHT

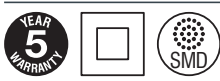

SIRIO LED PANELS

36W & 60W RANGE

Available in warm white, cool white & daylight white

NEW
PRODUCT

Direct replacements for 4 x 18W or 4 x 36W T8 fluorescent ceiling fittings, the Sirio is a flicker free LED panel range. Designed for T-bar ceilings, the ultra slim panel comes with driver included and is available in 36W or 60W LED modules. The Sirio uses edge lit technology for a high light output of up to 6090 lumens. The square panel is available in a choice of daylight, cool or warm white and as standard or emergency. The rectangle panel is available as standard with a cool white light. Each panel has a 5 year warranty (driver)

DAYLIGHT HARVESTING SIRIO RANGE INTELLIGENT LIGHTING

NEW
PRODUCT

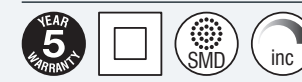

Adjusts to changes in natural daylight

The Sirio Daylight Harvesting panel automatically adjusts the light output to achieve the target lux level by sensing the amount of natural light in the room. The photosensor & driver fits to our popular Sirio panel range. Fully adjustable from 100 lux to 450 lux in 50 lux steps by using DIP switches when installing the panel. Using edge lit technology each LED panel is designed with an ultra slim profile for use in T-bar ceilings.

The constant current driver is capable of being adjusted with an output from 700mA to 1050mA, but it has been factory set at 1000mA and 450 lux so it will work straight out of the box with your Sirio panel

SIRIO PANEL DAYLIGHT HARVESTING

- Aluminium alloy & polystyrene
- Gloss white & opal plastic
- Min void: 100mm
- 36W LED module (SMD 4014)
- Daylight adaptive, fully adjustable 100 lux - 450 lux
- Complete with LED driver

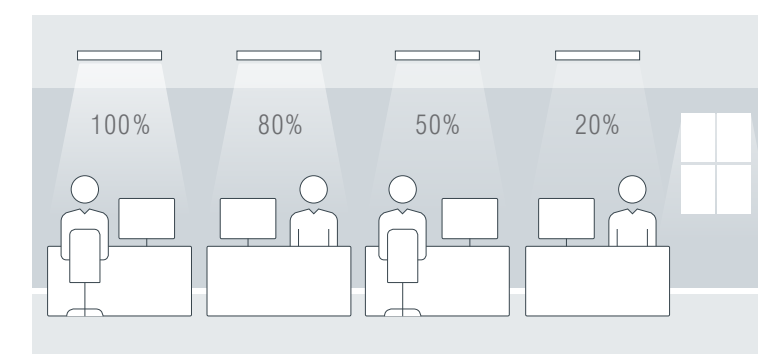

SIMPLE INSTALL
With our easy push fit connectors each Sirio panel is quick to install

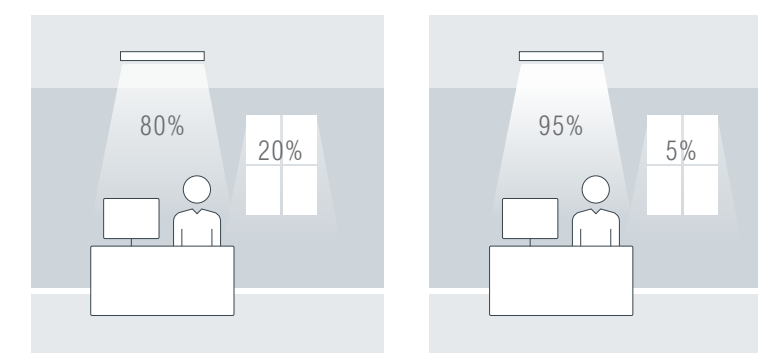

TWO SENSORS
Sense & adjust to the ambient light in the room & the light output from the panel

DAYLIGHT HARVESTING EXPLAINED...

When the panels are in operation they automatically adjust the light output based on ambient light level so the panel furthest from the window is the brightest and the room has an even level of light throughout.

The driver is sensitive enough to adjust depending on changing light conditions outside too.

REEVE 2

A direct LED replacement for twin 35W T5 fittings, this self contained anti corrosive LED batten has sealed end caps, ensuring its IP65 rating. The Reeve 2 benefits from an easy and quick installation with the use of the supplied stainless steel clips. It can also be wired from a central wiring point due to the groove along the back of the fitting to hide the cable for a clean finish

SURFACE MOUNTED LUIK MICROWAVE RANGE ROBUST TOUGH BULKHEAD

NEW
PRODUCT

Each fitting is only activated by movement

Slimline bulkhead with microwave sensor, this is a new addition to our Luik range. The introduction of the microwave sensor will save on wasted energy by only activating when movement is detected. Ideal for warehouses, schools, car parks, offices and hospitals. The Luik is surface mounted and constructed from aluminium alloy & polycarbonate, benefiting from the latest LED technology and up to 1210 lumens. An emergency option is also available

LUIK MICROWAVE RANGE ROBUST & SLIMLINE

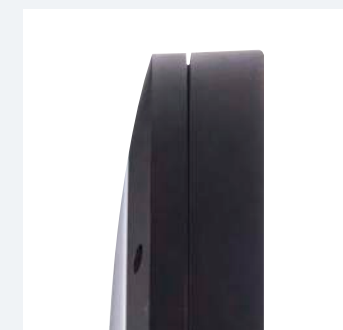

- Die cast aluminium alloy & polycarbonate
- Proj: 64mm Dia: 359mm
- 18W LED module (SMD 2835)
- Complete with LED driver

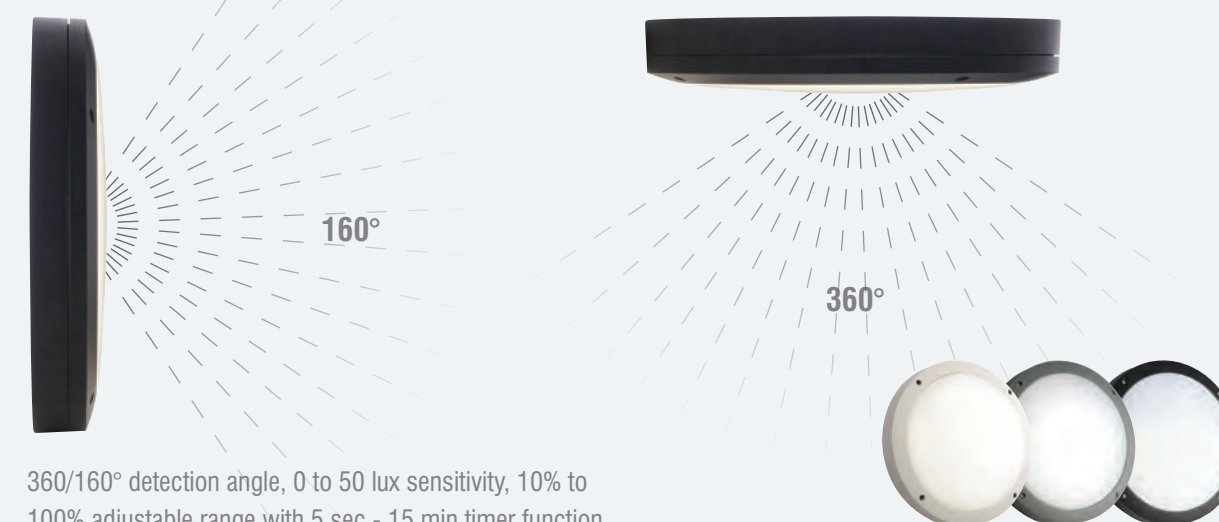

More style & finish options, see overleaf

RANGE EXTENSION SEINA RANGE RGB LED BRICK LIGHTS

NEW
PRODUCT

RGB LED brick light is colour changing
No special cutting required

The Seina RGB is a colour changing brick light with a specially designed rear housing unit that is the size of a regular brick. There is no special cutting required and with its angled cable glands and fast fix terminal block, a straightforward installation is ensured. There are a number of colour changing functions, controlled by the supplied remote control. Marine grade brushed stainless steel and textured black finish options available in the range

SEINA RANGE NOW AVAILABLE IN RGB

- 67602: marine grade stainless steel (316) & polycarbonate
- 67603: stainless steel (304) & polycarbonate
- 4.5W LED module (SMD 5050) RGB
- Complete with LED driver
- No special cutting required
- RGB: 7 colours available
- Switch between colours
- Colour sequence: red, green, blue, yellow, light blue, purple and white.

CONNECTIONS
Secure entry cable glands
and fast fix terminal block

IKONPRO DETECTOR

TWILIGHT OR PIR DETECTOR

NEW
PRODUCT

Simple to connect in-line with single colour IkonPRO kits

Add extra functionality to the IkonPRO with our new Twilight or PIR detectors. PIR Presence Detector will turn on automatically when approached. After a short period of time the kit will turn off. The Photocell Twilight Detector will automatically turn on when the ambient light drops below a certain level and turn off as the light increases. Both are simple to connect in-line with the single colour IkonPRO kits

RECESSED LIGHTING

FIRE RATED 8
DOWNLIGHT 22
ACCESSORY 28

Our fire rated range

Our shieldLED, shieldPLUS and OrbitalPLUS fire rated downlights combine style with practicality. Providing a product which is suitable for use in a variety of applications, whilst ensuring all relevant British Standards are met. The entire range can be used in 30, 60 and 90 minute rated ceilings and have been acoustically tested offering resistance to the passage of sound

Our Promise

All our fire rated downlights use proven intumescent technologies to comply with the latest building regulations

The FACTS about fire rated downlights...

WHY - Part B of the current building regulations and fire safety require that where recessed downlights are installed, the resistance of the ceiling to fire must not be impaired, assisting in controlling the spread of fire

WHERE - The height of the property defines the fire rating required. For up to 5m, 30 minute fire rated downlights are required. For buildings from 5m to 18m, 60 minute fire rated downlights are required. Above that height 90 minute fire rated downlights must be fitted throughout

HOW - Our products use intumescent material in the specially designed can

1

Fire starts

2

As the intensity grows, the holes in the can start to close up

3

The ceiling integrity is maintained as the holes close up completely

INSTALLATION - Installation is no different to a standard downlight with a standard spring clip fitting. Suitable for ceilings up to 35mm thick. There are IP65 options available in the catalogue for installation in high moisture areas

ENERGY EFFICIENCY - For the best energy efficiency we would recommend the shieldLED or OrbitalPLUS with the dedicated light source. These are available in a choice of wattages and colour temperatures allowing you to select the ideal product. The shieldPLUS are provided lamp free or with a LED lamp included. We now offer LED COB and SMD lamps for use in the enclosed can of our fire rated products

WHAT ELSE - Our products resist the passage of sound, maintaining the ceiling's acoustic properties and complying with Part E of the building regulations. Our IP rated products stop the passage of moist air into roof voids and therefore comply with Part C of the building regulations

Choose the SHIELD fire rated product for your project

We offer a variety of choice within the extended SHIELD range. A choice of finishes, lumen outputs, IP ratings and style to suit any application. Ideal for commercial and domestic use

PREMIUM RANGE

- 800, 600 or 400 lumen output
- IP65 rating
- COB LED
- Finish options
- Sophisticated Micro Lens Array technology
- Commercial & residential use
- Push fit installation

PRODUCT FOCUS

ORBITALPLUS

ANTI GLARE & FIRE RATED

Suitable for domestic and commercial environments

Slim profile fitting, ideal for low ceiling voids and easy installation. Benefit from a dimmable Eaglerise driver and 5 year warranty on the full OrbitalPLUS range

The OrbitalPlus is an upgraded version of our best-selling Orbital. It is fire rated and has brighter LEDs and is IP65 rated, but with the same great features as before; unique and patented indirect light output, able to be covered with insulation and fits into shallow ceiling spaces. Supplied with a dimmable Eaglerise driver, it is available with warm white or cool white LEDs and in three finishes: satin nickel, chrome and matt white

Designed for **ease of installation** and **function**

RECESSED FIRE RATED 17

Our shieldPLUS range of fire rated downlights feature a push fit installation combined with style, practicality and ease of fit; they meet the BS requirements for 30, 60 and 90 minute ceilings and are resistant to the passage of sound. Some models can be used for Part C compliance, please check the individual product for the relevant technical details. See page 246 for lamps

LAMP

ORBITAL

The Orbital is a recessed LED downlight with no visible light source. The SMD LEDs are hidden to reduce glare, and the specially painted dome reflects the light out of the product. The LED gives a high light output too. Available in 5W and 12W options, both with a 120° beam, giving good light coverage. The anti glare design is extra slim, allowing easy install into shallow ceiling voids, and can be covered with insulation. Matt white finish and includes a dimmable LED driver

LHGU10	GU10 lampholder 50W	H: 88mm W: 25mm L: 185mm

HEATGUARD

With the increased use of downlights in ceilings, the integrity of the plasterboard and suspended ceilings is severely reduced. Intumescent downlight hoods restore the integrity required by British Standards and building regulations. The fireguards can be easily installed from below or above the ceiling and are certified to British Standards for all types of ceilings. These items can be used with most of our downlights

Our Avanti panel uses the latest materials and technologies to ensure reliable performance. The extruded aluminium frame gives structural support and ensures that the LEDs are cooled properly. The laser etched acrylic core ensures that the light is uniformly transmitted across the full width of the panel. An even light output of up to 3200 lumens is then provided by the polycarbonate diffuser. Available in two colour temperatures and supplied with an Eaglerise driver for peace of mind. An Eaglerise DALI controllable driver is also available (69515)

ZIRA

Our range of high powered LED high bays. These high quality fittings use the die cast aluminium alloy body as a large heatsink to ensure that the LEDs are cooled efficiently and are supplied with a polished aluminium reflector with a beam angle of 110°. We have four wattages in the range, 50W, 100W, 150W and 200W with a lumen outputs from 3,850lm to 16,950lm so you can find the right fitting for your application. The products are supplied with 1.5m of pre-terminated cable. There is an integral mounting ring that can be used to secure the fitting with wire or chain as required

PRODUCT FOCUS

ZIRA HIGH BAY

HIGH POWERED LEDs

High quality fittings featuring the latest in LED SMD technology, providing a very bright cool white light along a beam angle of 110°

The high powered LEDs are fitted into a die cast aluminium alloy body which acts as a large heatsink to cool the LEDs efficiently

There is a Zira high bay to suit your application, available in four sizes and lumen outputs. This range is among our most powerful and bright fittings within this catalogue. With up to 16,950 lumen output from our largest fitting, the Zira is ideal for factories, warehousing and retail

Designed for **ease of installation** and **function**

LINEAR SINGLE

The Linear is our range of LED battens that offers comparable performance to T8 products. Using the latest in LED technology coupled with high performance light diffusion materials to eliminate the LED spots that you get on other products, the smart design means that they can be used in a variety of locations, from offices and corridors to garages and utility rooms. These have significant energy savings when compared to fluorescent products, saving you money with no sacrifices in light output. Available in lengths of 4ft, 5ft or 6ft, and as single or twin

INSTALLATION IS SIMPLE - The unique installation design is exclusive to Saxby Lighting. Easy to install, the Cobra comes with a back plate which is secured to the ceiling or wall with the mounting plate. Once wired in, the Cobra XS fitting, in either warm white or cool white, can simply twist until a click is heard, the Cobra XS is now locked into place

FIT IN PLACE DURING FINAL STAGES OF A BUILD - Designed for the back and mounting plate to be wired and fitted during the construction and finishing stages of a build. These are lightweight and easy to install whilst up a ladder. Allowing the finishing touches such as painting to be completed before fully installing the Cobra XS

Cobra XS installation guide

1. Pull wire through the grommet in the back plate

2. Connect wire to terminal block within the mounting plate

3. Screw the mounting plate to the ceiling
4. When the build is complete, place the Cobra XS fitting

5. Line up the connectors

6. Twist & click the Cobra XS fitting into place

90 KITCHEN TAPE

PRODUCT FOCUS

AQUALINE PREMIUM

FLEXIBLE ADHESIVE TAPE

Create mood with adaptable, flexible & colour changing LEDs. IP44 rated, ideal for wet indoor & outdoor spaces

Available in 5m strips, the Aqualine 12V Premium kit comes complete with LED driver, plug and remote control. The water resistant tape is perfect for creating mood lighting or adding a touch of colour

The kit has a variety of functions, including being able to have 3 to 7 colours on the strip at the same time, colour chasing along the length as well as pulsing or flowing colours

Designed for **ease of installation** and **function**

KITCHEN TAPE 91

FLEXLINE

Flexline is an indoor LED tape; an energy efficient, adaptable and flexible lighting solution. With its flexible polymer PCB and adhesive backing, it is perfect for accent lighting or mood lighting; use it on bookshelves to highlight ornaments and in kitchens for fully flexible lighting. It is available in warm white, daylight white, blue and in RGB to bring a splash of colour to any lighting design

YEAR 2 WARRANTY

AQUALINE ACCESSORY KIT EXPLAINED

The Aqualine accessory kits contain everything that is required for safely installing Aqualine strips. Below is an explanation of the Aqualine RGB accessory kit

1. 'L' CONNECTOR - These can be used for a flat 90° turn. N.B the flex cannot be bent around corners
2. 150MM WHITE INTERCONNECTION CABLE - These can be used for a flat 90° turn. N.B the flex cannot be bent around corners
3. SILICON CLIPS - For extra fixing support in addition to the self adhesive. Would normally only be required on shiny or smooth surfaces where the self adhesive strip may not bond completely
4. MALE 4 PIN CONNECTORS - These connectors are used to connect the strips together, they simply push into position between two strips. These are also required for joining the L connector to the flex
5. PLASTIC HEAT SHRINK TUBE - Needs to be slid over points where the flex has been cut and re-joined to give a waterproof seal (silicone sealant also needs to be applied)
6. SELF TAPPING SCREWS - Used for fixing clips provided

7. TUBE OF SILICONE SEALANT - Sealant is supplied for spreading over the points where flex has been cut and re-joined, after the heatshrink has been applied
8. NOZZLE - For the tube of sealant with the tip cut off. This replaces the lid of the sealant to enable more precise application of the silicone
9. POWER LEAD 0.5M - Only relevant if not using our driver. Connect the strip to your chosen driver
10. RGB REMOTE CONTROL - Turn on/off & adjust the brightness. Select exact colour from red to yellow, green to cyan & blue to violet. Make the LEDs white. Flash gives a fast sequence through the colours. Strobe has the same effect but longer time on each colour. Fade & smooth has a graduated colour change at two different speeds
11. INLINE RGB CONTROLLER - This receives the signal transmitted from the remote and translates it into electrical signals so the correct LED sequence displays

PRODUCT FOCUS
SABRE PIR RANGE
COMPACT & POWERFUL

The Sabre PIR range offers all the same benefits of a Sabre, plus a built in PIR motion detector for added security

The latest in PIR sensors, each Sabre has a 90° detection angle and 7m range. Ideal for commercial or domestic applications

The Sabre is a range of compact and energy efficient wall lights with PIR motion sensor. Small in size, but with a powerful light output of up to 4000 lumens. Available in 10W, 20W, 30W & 50W, each fitting has a slim profile and is complete with integrated control gear and the latest in driver on board technology

Designed for **ease of installation** and **function**

The Olea is a modern LED alternative to the traditional floodlight, suitable for both domestic and commercial settings. Available in 11W, 32W and 51W. PIR, standard and sensor options available

PRODUCT FOCUS
SEVERUS RANGE
SURFACE MOUNTED GUIDE

Discreet and easy to fit. The Severus range has the latest in integrated LED technology, keeping the fitting as slim as possible

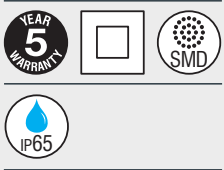

The clever design means that you can now fit guide lights when you are not able to cut holes in your wall

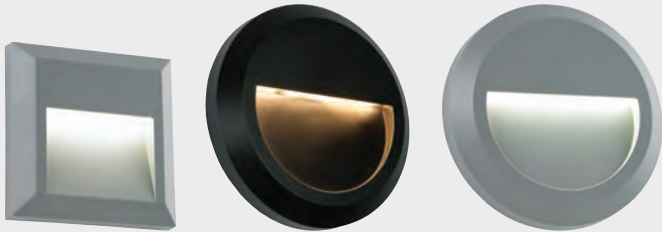

Manufactured from polycarbonate, they are the ideal choice for coastal locations. Available in a choice of direct and indirect, shape and finish. The slim profile and integrated driver allows us to keep the projection from the wall to a minimum and the IP rating is ensured by the gasket and the diffuser when it is fitted into place

Designed for **ease of installation** and **function**

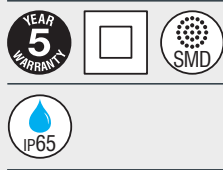

The Severus indirect range of surface mounted LED guide lights are quick and easy to fit. The clever design means that you can now fit guide lights when you are not able to cut holes in the wall. Providing up to 50 lumens of warm white light. Packed with the latest LED technology to ensure the projection is kept to a minimum. Indirect fittings are available in round, square, landscape and portrait, with a choice of grey or black finishes

PRODUCT FOCUS
GATSBY RANGE
GUIDING THE WAY

Smooth glow from the cool white LEDs
Ideal for low level lighting on stairs and corridors

SOLD OUT

The Gatsby is a contemporary styled recessed guide light, suitable for both indoor and outdoor use

With an IK02 rating and die cast aluminium construction each fitting is vandal resistant. The design will minimise glare as the LEDs face downwards. Its directional light illuminates the areas you need, making this suitable for use in stairways or corridors. Available in two sizes

Designed for **ease of installation** and **function**

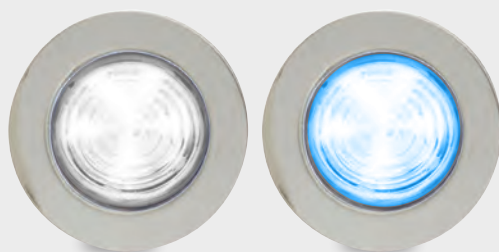

The IKON PRO is designed with unique removable and interchangeable heads

The Fresnel lenses improve lumen output, diffusing the spread of light evenly. Designed to be fitted and wired during the decking build stage without the heads. The supplied rubber caps protect the fitting from the elements until the decking is complete

- Each individual IP67 head easily connects and can be placed into position quickly
- Mix and match colour and sizes with white and blue options
- RGB kit is available in 3 different sizes – mix and match sizes
- Connect up to 20 heads with one driver (not available with the 59138)

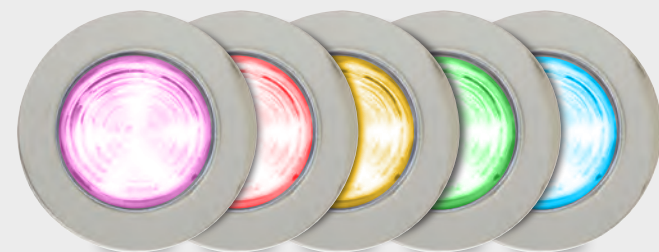

The IKON PRO range colour options...

This design is registered with
A©ID

White / Blue

- Available in 3 different sizes
- Complete kit supplied
- Stainless steel (201) & polycarbonate
- 10 x 0.75W LED module (SMD 2835)
- Cool White
- Polished stainless steel & clear pc finish
- LED driver – Included

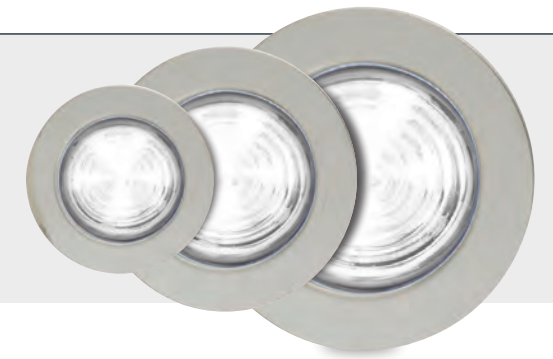

RGB (Multi-coloured)

- Available in 3 different sizes
- Complete kit supplied
- Stainless steel (201) & polycarbonate
- 10 x 0.75W LED module (SMD 5050)
- Colour changing
- Polished stainless steel & clear pc finish
- LED driver – Included

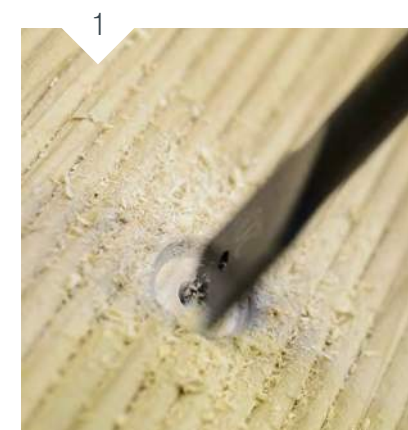

The IKON PRO range size options

The Ikon Pro range comes in three different head sizes – 25mm, 35mm and 45mm. Mix and match sizes, colours or both. Connect up to 20 heads with one driver

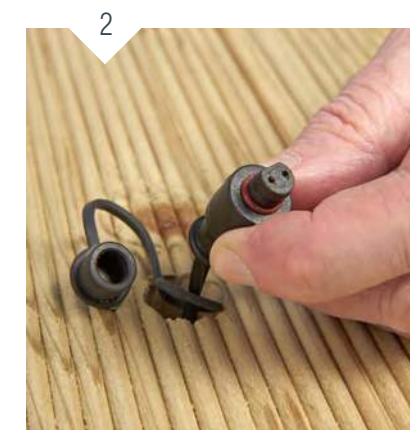

Fitting the IKON PRO couldn't be easier....

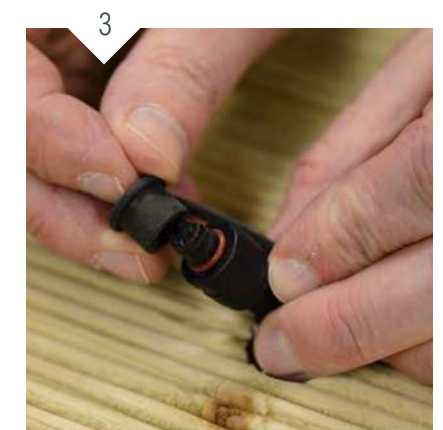

The clever design of the IP67 connector means that you can mix the blue and white LED heads and different sizes too. Use the Ikon Pro heads to indicate a change of level or zone. The extension cable can be fitted between the driver and the first loom or between the two looms enabling you to configure your product perfectly.

1 Drill hole to the correct size

2 Push the wiring up through the hole

3 Use protective caps during construction

4 Place the LED heads onto the loom

5 Firmly push the head into place

6 Plug in and switch on

IKON PRO Brass finish

- Available in 3 different sizes
- Complete kit supplied
- Stainless steel (201) & polycarbonate
- 10 x 0.75W LED module (SMD 5050)
- Warm White
- Brass finish

SOLD OUT

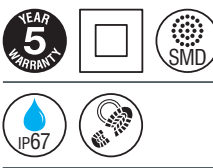

IKON PRO

Unique design of removable and interchangeable heads, extending our decking kit range. Designed to be fitted and wired during the decking build stage without the heads. Supplied with rubber caps to protect the fitting from the elements until the decking is complete. Each IP67 head easily connects and can be placed into position quickly, adding the final touches to the decking design

MIX & MATCH*

LINEAR

The Linear is our range of LED battens that offers comparable performance to T8 products. Using the latest in LED technology, coupled with high performance light diffusion materials to eliminate the LED spots that you get on other products. The smart design means that they can be used in a variety of locations, from offices and corridors to garages and utility rooms. These have significant energy savings when compared to fluorescent products, saving you money with no sacrifices in light output. Available in lengths of 4ft, 5ft or 6ft, and as single or twin

LAMP GU10 249

GU10 LED SMD

A super bright 7W SMD GU10 lamp with up to 590 lumens, available in warm white and cool white, incorporating the latest LED technology. This ensures the lamp can be used safely within enclosed heads, such as outdoor, bathroom and fire recessed cans, with no reduction in performance or lifetime. This range is the equivalent to a 75W halogen, dimmable options available

E27 LED GLS SWITCH DIMMING

This is our first switch dimming lamp, no dimmer switch or rewiring required! This E27 LED GLS has all the benefits of a standard 10W LED, with an 800 lumen output, but it also has the ability to be dimmed with a regular switch, avoiding any issues with dimmer capability. Simply turn the switch off and on to toggle between the dimmed options

E27 LED GLS SWITCH DIMMING

HOW IT WORKS

1. Switch the light on, this will give 100% of the 10W lamp output, 800 lumens

2. Turn the switch off and on again to lower the light output to 60% of maximum

3. Further switching will lower the light output to 40% and 15%

4. Switch between these to find your preferred dimmed option

CODE	DESCRIPTION	LAMP TEMP	LM	LM/W	DIMENSIONS

LAMP E27 261

E27 LED GLS RGB

This 10W LED E27 is our first colour changing E27 lamp! This exciting colour changing lamp can be used as a regular room light with a bright, warm white glow for day to day tasks, but with a quick button press on the remote, the lamp will change colour. Simple and easy to use and a great way to change the mood and atmosphere in any room. Ideal for bedrooms and theming in restaurants, bars and cafes

10W **E27 LED GLS RGB**

COLOUR CHANGING

HOW IT WORKS

- Pick red, green and blue colours and a variety of shades
- The lamp can fade between colours and can be dimmed using the remote
- Strobe and flash options

CLEVER LAMP: When switched off, the lamp will remember what setting it last had when switched back on

Emergency Non Maintained

Emergency Maintained Self Test

Interactive Icons

Cool touch product

Includes PIR sensor

Not suitable for dimming

Dimmable when used with a compatible lamp/dimmer switch

Dimmer or other control solution available

Includes touch three stage dimmer switch

Dimmer switch included

Includes touch four stage dimmer switch

Dimmable with regular switch

Colour changing with regular switch

Includes rocker switch

Includes inline infra-red hand sensor

Includes push switch

Includes infra-red hand sensor

Includes microwave sensor

Includes remote control

Includes RGB remote control

Includes photocell sensor

Includes photocell and PIR sensor

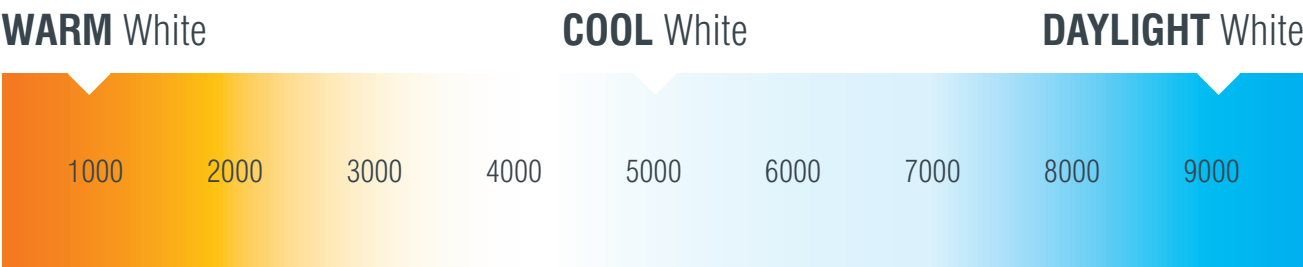

Abbreviations

- ◆ H: Height ◆ W: Width ◆ L: Length ◆ D: Depth ◆ Proj: Projection ◆ Dia: Diameter
- ◆ Sq: Square ◆ K: Kelvin ◆ Lm: Lumens ◆ Lm/W: Lumens per Watt

Lamp Temperature

When thinking about lamp and fitting choice it’s important to understand that every light source has two distinct elements. The first part is brightness which is measured in lumens; this is a measure of the amount of light that it will give out

The second part is the colour temperature, which is measured in kelvin and indicates how cool or warm the light is. Warmer fittings and lamps have low kelvin numbers, whereas cooler lamps and fittings will have a kelvin that is high. Choosing the right fitting or lamp helps to create the right effect within your chosen room

WARM White (<3800k)

WARM

Warmer whites are generally preferred for creating a more relaxed environment in dining, living or reception areas

COOL White (3900k to 5800k)

COOL

Cool white is a good choice for retail and office environments where a simulated natural, outdoor light is preferred. Use in modern contemporary kitchens and bathrooms to complement the décor

DAYLIGHT White (>5900k)

DAYLIGHT

Perfect for industrial and healthcare applications where the most natural lighting is required

Finding Your LED Equivalent

LED	3W	5W	7W	9W	12W
INCANDESCENT	25W	40W	60W	75W	100W
HALOGEN	18W	28W	42W	55W	70W
LUMENS	200	400	600	800	1000
CFL	5W	8W	12W	15W	20W

Ingress Protection (IP) Rating

Each light within our brochure has been given an appropriate IP rating; this relates to the degree of protection the light provides against solid object and water ingress. IP ratings are relevant to anywhere that moisture is prevalent, such as bathrooms, utility rooms and exterior environments. Written as IPxx, the first x defines the level of protection offered from dust; the second x defines the level of protection offered from moisture. The higher the numbers are, the better the protection will be

INGRESS PROTECTION

SOLID OBJECT

1

Protected against a solid object greater than 50mm such as a hand

2

Protected against a solid object greater than 12.5mm such as a finger

3

Protected against a solid object greater than 2.5mm such as a screwdriver

4

Protected against a solid object greater than 1mm such as a wire

5

Dust protected. Limited ingress of dust permitted. Will not interfere with operation of the equipment

6

Dust tight. No ingress of dust

IP65

MOISTURE

1

Protected against vertical falling drops of water. Limited ingress permitted

2

Protected against vertical falling drops of water with enclosure tilted up to 15 degrees from the vertical. Limited ingress permitted

3

Protected against sprays of water up to 60 degrees from the vertical. Limited ingress permitted

4

Protected against water splashes from all directions. Limited ingress permitted

5

Protected against jets of water. Limited ingress permitted

6

Protected against powerful jets of water. Limited ingress permitted

7

Watertight against the effects of immersion in water between 15cm and 1m for 30 minutes

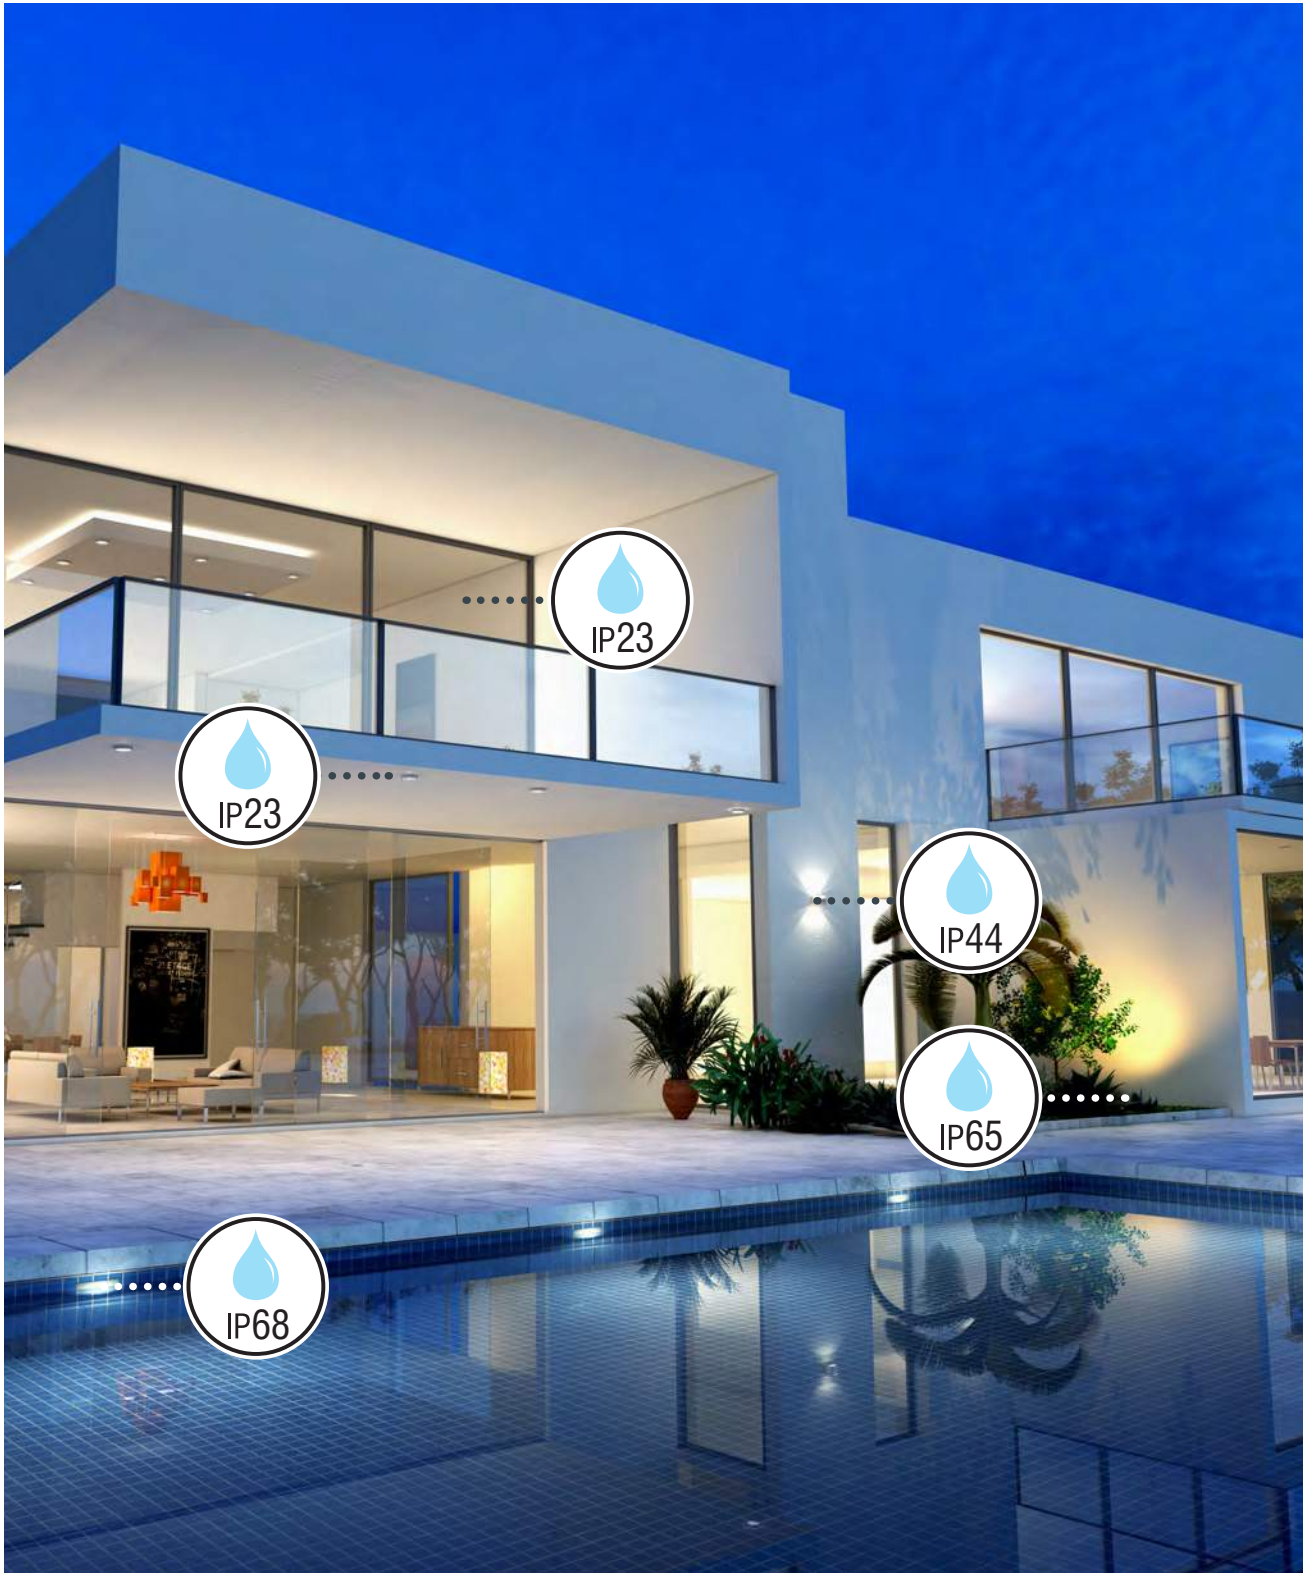

8

Watertight against the effects of immersion in water under pressure for long periods

Choose the right IP rating for your location

In most cases a product with a rating of IP44 will be suitable for the majority of locations, but there are certain circumstances where a lower or higher rating would be more appropriate. For products fitted in porches or downlights fitted in soffits, the property will give a certain amount of protection and these can be rated IP23

For commercial properties we offer wall and ground light products with improved seals that have a higher rating of IP65. Our IP67 rated products are the most resilient, and can withstand almost all weather conditions

Benefits of LED Lighting

ENERGY EFFICIENCY - The energy saving from an LED lamp is substantial; compared to an incandescent lamp, you will only use around 20% of the energy. They are even more efficient than fluorescent lamps too, saving 20% on the running cost for a similar light output

MUCH LONGER LIFESPAN - LED lamps have a much longer lifetime, on average 15 times longer than the original incandescent lamps, so they don’t need to be replaced as often

INSTANT LIGHT - Fluorescent energy saving lamps take a long time to reach full brightness, whereas LED alternatives produce light at full intensity instantly

ENVIRONMENTALLY FRIENDLY - Not only do LED lamps and fittings last much longer, but they use less energy than other light sources

SAFE - Unlike fluorescent lamps, LED lamps do not contain mercury. This makes them easy to recycle and safe to have around the home too

LEDs Explained

Technology has progressed further, to a point where there is a direct LED equivalent to existing halogen and incandescent lamps. The future is bright too; new technology will see brighter LEDs using even less power than they currently do

- 

SMD - An established technology now, these LEDs offer a variety of package sizes and light outputs. They are normally used in an array form, to give an even spread of light
- 

COB - This LED has a number of separate chips embedded in phosphor and mounted on a ceramic package. This gives greatly improved lumens per watt, better cooling and superior light output
- 

HI POWER - These types of LED offer superior light output, but have higher power requirements. Normally available in 1W or 3W, these require a heatsink to run at the correct temperature
- 

RGB - Red, green, blue (RGB) LEDs have three separate LEDs embedded in one chip. They allow precise selection for the ultimate in accent lighting
- 

FILAMENT - The strips of phosphor have tiny LED chips embedded inside. When they are lit, they shine in a similar way to the original incandescent lamps. They are perfect for products with crystal and open shades
- 

DOB - Driver On Board is a new technology using both SMD and COB LEDs, but without an external driver. The power control circuitry is integrated onto the printed circuit board (PCB) and these are connected directly to the mains power source

Lamp Data Explained

The lumen figures quoted in the catalogue are for guidance only. The lumen figure is for the entire product and the Lm/W can be used when selecting products which are Part L compliant

CODE	DESCRIPTION	FINISH	LAMP TEMP	LM	LM/W
52728	shieldLED 800 fixed IP65 11W	Satin Nickel & clear acrylic	Warm White – 3000K	750	68

• K: 3000 Lm: 750 Lm/W: 68

Colour Rendering Index (CRI)

This figure is a percentage and relates to the ability of the lamp or product to show accurate colours when compared to a reference light source. All of our lamps and integrated products have a CRI in excess of 80 and 65 for outdoor lighting

Energy Saving - All products supplied with a lamp or light source must have a declared energy rating. This can be found on the packaging. The most energy efficient products are rated A+ +. We also include Lm/W figures for all lamps and products with a light source so you can make an informed choice on the best product for your application

Building regulations

Part B - This regulation refers to the fire safety requirements that new buildings must meet. Recessed products that break the fire barrier during installation must ensure that they are capable of maintaining the original barrier against fire

Part C - This regulation covers requirements on the flow of air and moisture in a building

Part E - This regulation also refers to recessed products and their ability to minimise sound passing through from one part of a property to another

Part L - This regulation outlines minimum energy efficiency requirements for all commercial and domestic properties. All lights fitted must meet minimum Lm/W requirements

Part P - This regulation refers to the safe installation of all electrical fittings and lighting and the inspection, testing and certification of a property

Glossary

ELECTRICAL

a.c. - Is the acronym for alternating current

d.c. - Is the acronym for direct current

Watt - This is the amount of energy that a product consumes

mA - This is the rate of flow of electricity, measured in amps. You would normally come across this as the output of a constant current LED driver

Volts - The volt is a measure of electric potential. The UK mains voltage is 240V

Constant current - This refers to the output from an LED driver, in these the current output remains the same, i.e. 350mA, and the voltage increases as the power increases

Constant voltage - This refers to the output from an LED driver, in these the voltage output remains the same, i.e. 12V, and the current increases as the power increases

Hertz - This is the unit of frequency. The UK mains a.c. supply voltage is set at 50Hz

Class 1 - This fitting has basic insulation and relies on an earth connection for safety

Class 2 - This fitting has two layers of insulation and does not require an earth connection. Often known as double insulated

Class 3 - Sometimes known as Safety Extra Low Voltage (SELV), the operating voltage of these products is lower than 50V and is isolated from the mains supply

kWh - 1000W of electricity used over the period of one hour

LIGHT SOURCE

LED – Is the acronym for Light Emitting Diode

Kelvin – This figure defines the colour temperature of visible light. The units are K

SDCM – This is an acronym for Standard Deviation Colour Matching and is a way of measuring the differences between LEDs of the same colour. Sometimes called the MacAdam Ellipse

Lumen – A measure of the quantity of visible light from a lamp or product

RGB – Is the acronym for red, green and blue for an LED that can change colour

CRI – Is the acronym for Colour Rendering Index. It relates to the ability of the lamp or product to show accurate colours when compared to a reference light source

Lux – A measure of the intensity of light, defined as 1lm /m2

LM80 – This is a standard for measuring the lumen depreciation of a solid state light source

Efficiency – Lamp and luminaire efficiency is measured in Lm/W. This gives an accurate comparison between different types of fittings for energy usage

SENSORS

PIR – Also known as passive infrared, the sensor detects the heat energy that all living bodies give off. When a person walks in front of the fitting, the sensor detects the change in the radiation and turns on the light

Photocell – Sometimes known as a dusk to dawn sensor. The sensor reacts to the ambient light and will turn the fitting on when a pre-set light level is reached. The light will remain on until the light increases to another pre-set level where it will turn off

Microwave – These have a similar operation to the PIR but work by detecting motion. They send a continuous wave of radiation out and if there is any movement in their range they detect the change in frequency and operate the light. They can be fitted internally as the microwaves will pass through some materials, and can even pass through walls

Infra-red – These are short range movement sensors and are used for hands free operation of lights where you may have wet hands. The IR sensor is a little module with an emitter and a detector, it emits a beam of infra-red (like your TV remote), and when the beam is broken the detector will activate the sensor

Touch (Resistive) – A resistive touch switch relies on the natural conductivity of the skin and must be used with a conductive material

Touch (Capacitive) – Capacitive switches have the advantage of being able to work with non-conductive materials such as wood and plastics. These work by using the electrical charge (static electricity) that the human body naturally has. On touching the sensor, the electrical parameters change and the switch will operate

MISCELLANEOUS

IP – Is the acronym for ingress protection. The first number refers to the dust proofing and the second to the protection against water

IK – This is the numerical classification for impact protection of outdoor light fittings

Maintained – Emergency lights that operate as a normal light fitting and can be controlled with all the other lights in the area, however when the power fails the maintained emergency fitting will continue to operate but at a lower light level

Non Maintained – Is normally switched off, with its batteries being continuously charged and a green LED showing fully charged. When the power fails then the fitting switches on using its battery supply. Non-maintained fittings are not part of the general lighting but are fittings such as emergency exit signs

Terms & Conditions

Whilst every effort has been made to ensure that the information provided in this catalogue is accurate, we do not accept liability for errors or omissions in the descriptions, data, dimensions or any other information in the catalogue. No warranty, express or implied, is given that the information provided in this catalogue is error free. We try to ensure that colours and dimensions are correct at time of print, but these are given for guidance and comparison only and are subject to change without notice. Some of our products are handmade and are therefore subject to natural variation in colour and appearance. As a process of continual improvement, we reserve the right to amend and change the specification of products without notice. Prior to making any structural changes, please ensure physical confirmation of correct dimensions

All exterior products are covered by our guarantee. Unless specifically defined as high quality marine grade stainless steel, these guarantees are null and void if the products are installed or stored within or near a marine or sea and coastal environments or where there is salt, fertilisers and/or chemical pollution in the environment

Full terms and conditions available upon request

Quality Statement

Our company is committed to achieving great customer satisfaction by always putting our customers at the heart of everything we do. We are continually developing our systems and processes with the ultimate aim of getting it ‘right first time, every time’

Outdoor Lighting

Our cast aluminium, stainless steel and nylon fibre products have a 2 year guarantee against corrosion. These guarantees are null and void if products are installed where there is salt, fertilisers and/or chemical pollution in the air or have been sprayed with chemical cleaners and the product has not been maintained

Dimmer Switches

If your product is dimmable and requires a third party dimmer switch, compatibility is not guaranteed with all Saxby products. For further advice, please contact a qualified electrician or the manufacturer of the dimmer switch you intend to use. Do not use dimmer switches for tubular fluorescent lamps or energy efficient replacement compact fluorescent lamps. The dimmer switch will eventually burn out if used for these applications!

Products incorporating LEDs – A lot of our LED lamps and fittings can now be dimmed and we would recommend using a specific LED dimmer switch. Please verify with us that the product can be dimmed before consulting a qualified electrician or dimmer manufacturer for correct selection of dimmer switch

Products incorporating Integral Low Voltage Electronic Transformers (G4 halogen lamps) – We do not generally recommend dimming these products, but if dimming is necessary, then a specialised dimmer switch may be required. Please verify with us that the product can be dimmed before consulting a qualified electrician or dimmer manufacturer for correct selection of dimmer switch

Products Using Mains Voltage Halogen Bulbs (GU10, G9, ECO halogens and Linear Halogen Lamps) – Dimmer switches must not be overloaded. Some dimmer switches are designed to run warm and it is quite usual for the front plate to reach temperatures of approximately 50° Celsius during normal operation. When using halogen lamps make sure that the dimmer is rated at least twice the total wattage of the lamps to be dimmed, e.g. if using 3 x 50w GU10 halogen (150W), then make sure the dimmer is rated at 300W. See table below:

Maximum Load on Dimmer Switch Label	Maximum Load for Mains Halogen
300W	150W
500W	250W
1000W	500W

It is also quite normal to hear a slight buzzing sound coming from the dimmer switch in operation

Notes

This image shows a full page of blank, lined paper. It features approximately 30 horizontal blue or grey lines spaced evenly apart, typical of notebook paper. The lines extend across the entire width of the page, leaving small margins at the top and bottom. There are no vertical lines, text, or other markings present.

Notes

[illegible]

Notes

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.
